**P.O. Box 2847**  
**40487 DODOMA, TANZANIA**

# TABLE OF CONTENTS

|  |    |
|--|----|
| 1.0 INTRODUCTION .....                                 | 8  |
| 1.1 Overview of the Tanzania Fisheries Potential ..... | 8  |
| 1.2 Importance of the Fisheries Sector .....           | 11 |
| 2.0 ARTISAN FISHERIES SECTOR PERFORMANCE IN 2020 ..... | 18 |
| 2.1 Fishing Effort in 2020 .....                       | 18 |
| 2.2 Fish Production .....                              | 20 |
| 2.2.1 Lake Victoria .....                              | 21 |
| 2.2.2 LAKE TANGANYIKA .....                            | 25 |
| 2.2.3 Territorial Marine Water .....                   | 31 |
| 2.2.4 Lake Nyasa .....                                 | 43 |
| 2.3 Export of fish and fishery Products .....          | 47 |
| 2.4 Import fisheries import data .....                 | 60 |
| 3.0 conclusion and Way forward .....                   | 61 |
| 4.0 WAY FORWARD .....                                  | 62 |

## LIST OF TABLES

|  |    |

## **1.0 INTRODUCTION**

### **1.1 Overview of the Tanzania Fisheries Potential**

Tanzania is a coastal state on the Western Indian Ocean situated in the Eastern part of Africa which has blessed with natural water resources ranges from inland to marine waters. Tanzania shares three major inland great lakes in Africa of Lake Victoria (shared by Kenya and Uganda), Lake Tanganyika and Lake Nyasa and other minor lakes, rivers, dams, ponds and wetlands. The country also has a coastline of about 1,242 kilometer long extending from North bordering with Kenya to South bordering with Mozambique. It has a territorial marine water of about 64,000 square kilometers and an Exclusive Economic Zone of 223,000 square kilometers. The distribution of major and minor water bodies in the country and its fisheries resource potential is as shown in the Table1 & 2 below. Water resources below host a numerous of fish species.

Table 1: The Distribution of water resources and estimated fisheries potential

| <b>Water body</b>         | <b>Total Area<br/>(km<sup>2</sup>)</b> | <b>Tanzanian share<br/>(area in km<sup>2</sup>)</b> | <b>Coverage (%)</b> | <b>Estimated Fisheries Potential (Tones)</b> | <b>Resource</b>  |
|---------------------------|--|---|---------------------|--|------------------|
| Lake Victoria             | 68,800                                 | 35,088  | 51                  |  | 3,465,913        |
| Lake Tanganyika           | 32,900                                 | 13,489  | 41                  |  | 295,000          |
| Lake Nyasa                | 30,800                                 | 5,760   | 20                  |  | 168,000          |
| Marine (Territorial sea)  | 64,000                                 | 64,000  | 100                 |  | 30,000           |
| EEZ                       | 223,000                                | 223,000   | 100                 |  | 100,000          |
| Other inland water bodies | 5,000                                  | 5,000   | 100                 |  | Unknown          |
| <b>Total</b>              |  |   |                     |  | <b>4,058,913</b> |

Table 2: Distribution of Major and minor water bodies

| Type of Water Body | Water Body      | Region                           |
|--------------------|-----------------|----------------------------------|
| Major Water Bodies | Indian Ocean    | Mtwara,Lindi,DSM,Coast and Tanga |
|                    | Lake Victoria   | Mwanza,Kagera and Mara           |
|                    | Lake Tanganyika | Kigoma and Rukwa                 |
|                    | Lake Nyasa      | Mbeya,Ruvuma and Iringa          |
|                    | Lake Rukwa      | Mbeya and Rukwa                  |
| Minor Water Bodies | Mtera Dam       | Dodoma and Iringa                |
|                    | Nyumba ya Mungu | Moshi and Arusha                 |
|                    | Lake Babati     |                                  |
|                    | Lake Basuto     |                                  |
|                    | Lake Kidawashi  |                                  |
|                    | Lake Kimotoro   | Manyara                          |
|                    | Lake Tlawi      |                                  |
|                    | Lake Eyasi      |                                  |
|                    | Lake Natroni    | Arusha                           |
|                    | Nondwa Dam      |                                  |
|                    | Bahi Dam        |                                  |
|                    | Hombolo Dam     |                                  |
|                    | Kisaki Dam      | Dodoma                           |
|                    | Lake Kitangiri  |                                  |
| Minor Water Bodies | Mgori Dam       |                                  |
|                    | Mianji Dam      |                                  |
|                    | Chibumagwa Dam  |                                  |
|                    | Lake Singidani  |                                  |
|                    | Lake Kindai     |                                  |
|                    | Lake Kibwi      | Singida                          |
|                    | Igombe River    |                                  |
|                    | Ugala River     |                                  |
|                    | Maboha River    |                                  |

## 1.2 Importance of the Fisheries Sector

The mentioned water resources harbor numerous fish species of great importance in proving food security and nutrition. It also offers an opportunity for fish farming and trade within and outside the country. The list of important fish species is as shown in the table 3 and 4 below.

Table 3: List of potential exploited Fish Species in Marine Territorial Water

| No. | Common /English Name     | Latin /Scientific Name             | Swahili Name | Habitat Classification |
|-----|--------------------------|------------------------------------|--------------|------------------------|
| 1.  | Thumbprint emperor       | <i>Lethrinus rhodopterus</i>       | Changu       | Reef fish              |
| 2.  | Peacock grouper          | <i>Cephalopholis argus</i>         | Chewa        | Reef fish              |
| 3.  | Yellowfin fusilier       | <i>Caesio xaenithonotus</i>        | Mbono        | Reef Fish              |
| 4.  | Dogtooth tuna            | <i>Gymnasada nuda</i>              | Jodari       | Tuna and Tuna likes    |
| 5.  | Slender silver-biddy     | <i>Gerres oblongus</i>             | Chaa         | Coral reef             |
| 6.  | Giant tiger prawn        | <i>Penaeus bubulus</i>             | Kamba mti    | Blackish water         |
| 7.  | Ornate spiny lobster     | <i>Panulirus ornatus</i>           | Kamba kache  | Coral reef             |
| 8.  | Blue- tail mullet        | <i>Oedalechilus kesteveni</i>      | Mkizi        | Colar Reef             |
| 9.  | Freckled gotfish         | <i>Upeneus oligospirurus</i>       | Mkundaji     | Medium Pelagic         |
| 10. | Japanese threadfin bream | <i>Nemipterus japonicus</i>        | Koana        | Medium Pelagic         |
| 11. | White-spotted octopus    | <i>Octopus chromatus</i>           | Pweza        | Colar reef             |
| 12. | East African sardinella, | <i>Sardinella neglecta</i>         | Dagaa-papa   | Small pelagic          |
| 13. | Carolines parrotfish     | <i>Carrotomus spinidens</i>        | Pono         | Bottom dwellers        |
| 14. | King fish                | <i>Scomberomorus plurilineatus</i> | Nguru        | Tuna and Tuna likes    |
| 15. | Indian Mackerel          | <i>Restrelliger chrysozonus</i>    | Vibua        | Small pelagic          |
| 16. | Indian Squids            | <i>Loligo duvaucelii</i>           | Ngisi        | Colar reef             |
| 17. | Silky shark              | <i>Carcharinus falciformis</i>     | Dagaa-Papa   | Small pelagic          |
| 18. | Commerson's anchovy      | <i>Anchoviella commersonii</i>     | Dagaa-mcheli | Small Pelagic          |
| 19. | White-spotted spine foot | <i>Siganus oramin</i>              | Tasi         | Reef fish              |
| 20. | Obtuse barracuda         | <i>Sphyraenella chrysotaenia</i>   | Msusa/Mzia   | Tuna and likes         |

The fisheries sector is among the important economic sectors in the country. It plays a significant role in social and economic development by contributing to the economic and social well-being of the country. The sector is a source of food security and nutrition, employment and income generation, recreation, tourism to attain sustainable National Development Goal. In 2020, the sector provided direct employment to about 202,053 and more than 4.5 million people indirectly depends on the fisheries related activities such fish traders processors and traders, fishing vessel manufacturers and suppliers, fishing gear menders, fish mongers and employees. The sector also contributed to the growth of the national economy. It contributed 1.71% to the National GDP the same as in the year 2018 and grew at 1.5% compared to 9.2% in 2018. The trend in growth and contribution of the sector to the National economy from 2012 to 2019 is shown in the figure 1 and 2 below. Either, reduction in growth of the sector for 2019 may be a result of the rapid growth in other economic sectors in the country such as communication sector.

Fish and fishery products are a very valuable source of protein and essential micronutrients which is important for balanced nutrition and good health in the human's body. Currently, fish provides around 25% of the total animal protein and in 2020, the per capita fish consumption (kg/capita) was 8.22. The trend in per capita fish consumption for five year (2016-2020) stands at an average of 7.89. The fish consumption rate in the country is still low compared to the existing fisheries potentials. Therefore, awareness creation to the communities especially to the pastoralists is of greater importance. The trend in fish consumption from 2016 to 2020 is shown in the table 5 below.

Table 5: The trend of fish consumption (2016- 2020)

| Category  | 2016           | 2017           | 2018           | 2019           | 2020               |

## 2.0 ARTISAN FISHERIES SECTOR PERFORMANCE IN 2020

The small scale fishery (artisanal) in the country contribute more than 90 percent of the total annual fish landings. The performance of the fishery can be determined by assessing its fishing efforts, fish catch, fish export and import. This information is of great importance in planning and decision making.

### 2.1 Fishing Effort in 2020

Fishing effort is a great determinant for the performance of a certain fishery. It explains combination of fishers, fishing vessels, fishing gears and time in a certain fishery. Other factors to support the explanation of fisheries sector performance of fishery include fish land-based facilities such as fish landing sites, fish market and cold store facilities. In 2020, number of fishing efforts (number of fishers, fishing vessels, fishing gear and fish land based facilities (fish landing sites) remained as it was in 2019. This is because there is no Fisheries Frame Survey conducted in any water body since 2018. However, the description on the general status of the small scale fishery fishing effort in the country is presented in table 6.

Table 6: Status of fishing effort in 2020

| Item                      | Marine | Lake Victoria | Lake Tanganyika | Lake Nyasa | Lake Rukwa | Nyumba ya Mungu | Mtera Dam | Minor Water | Total   |
|---------------------------|--------|---------------|-----------------|------------|------------|-----------------|-----------|-------------|---------|
| Number of landing site    | 274    | 642           | 239             | 114        | 20         | 12              | 28        | 18          | 1,347   |
| Number of fishers         | 53,035 | 109,397       | 26,612          | 5,550      | 3,428      | 1,269           | 2,369     | 879         | 202,539 |

## 2.2 Fish Production

Basing on the above fishing effort, the annual fish landings in 2020 was **473,592.24 MT** worth **2.37 Trillion Tshs** compared to **470,309.23** worth **2.210 Trillion Tshs** landed in 2019. The big share of fish catch observed in Lake Victoria for **58.0** percent of the total fish landings. The catch and percentage share of each water body are described in table 7 below.

Table 7: Total fish production from all major water bodies in Tanzania (Marine and Inland) 2020

## 2.4 Import fisheries import data

In 2020, the country received a total of 5.3 MT worth 27.2 Million TShs from outside the country. Fish importation is done not because of the shortage of fish in the country but mainly due to preferences of a certain type of fish which are not available in the county for the Hotels and supermarket purposes (Table 55). However, the trend of fish importation shows to decrease yearly (Table 56).

**Table 55: The status of fish Import in 2020.**

| OVERALL MONTHLY PERFORMACE FROM JANUARY TO DECEMBER, 2020. |               |                 |             |                |                  |                    |
|--|---------------|-----------------|-------------|----------------|------------------|--------------------|
| Fishery Product  | Weight (Tons) | Live Fish (Pcs) | Value (USD) | Value (Tshs)   | Import Fee (Tsh) | Country of Origin  |
| Aquarium Fish  |               | 1,489.12        | 27,173.13   | 4,018,688.63   | 572,685          | Singapore          |

| 2020 | 5.33        | 1489.12        | 49,933.72     | 114,864,544.45    | 27,168,209.20     |

### **3.0 CONCLUSION AND WAY FORWARD**

Data used on assessing the overall performance of the fisheries sector are usually derived from the Fisheries Frame Survey and Catch Assessment Survey (CAS). Fisheries Frame Survey is a census-based approach in which data and information related to all aspects of a certain fishery is collected. The data and information collected in this survey include fishing vessels, fishing gears, fishers and other beach based fisheries related services and facilities (fish landing sites, fish markets, cold store facilities e.t.c). On the other hand, Catch Assessment Survey is a daily routine catch data collection from specified landing sites within a specified time from certain water bodies. The data and information gathered from Fisheries Frame Survey used as a raising factor to estimate the total fish catch of a certain water body using data from Catch Assessment Survey.

These two Surveys together, therefore, provide the opportunity for gathering data and information such as fishing efforts, total catch and other supplementary fisheries-related information, which are useful for future planning purposes and decision making towards the sustainability of the fishery and other socio-economics issues of the fishing stakeholders and the nation at large. Other information and data usually collected during the survey include fish consumption, export and import. All these kinds of data and information are useful in explaining the Fisheries sector's performance at a specified area and time. However, due to reliable financial constraints, these surveys are not conducted as required and prevent the ability of the Ministry to have reliable, updated and accurate fisheries data and information.

#### **4.0 WAY FORWARD**

Basing on the above-mentioned facts, the Ministry of Livestock and Fisheries should put an extra effort to improve system for fisheries data and information collection. Setting aside enough fund to undertake frequent Fisheries Frame survey and Catch Assessment Survey which will enable to have up to date and reliable data. This efforts should go along with efforts to sensitize LGAs to participate fully in this excises by setting aside the fund and staff to undertake fisheries data collection involving BMUs and conduct thorough inventory of all minor water bodies in order to have a representative samples on the Tanzania fishery. Furthermore, use of mobile in data collection (e-CAS) should be enhanced at all levels.
